## PROFESSIONAL SUMMARY

Computer Engineering and Master of Engineering double degree student bridging advanced algorithmic problem-solving with scalable system architecture. Proven track record in full-stack enterprise web development, cloud AI integrations, and deploying complex time-series forecasting models. Strong foundation in low-level programming (C++), algorithm design, and data structures, seeking software engineering, quantitative analytics, or data science opportunities.

## EDUCATION

**CentraleSupélec**

*Master of Engineering*

Gif-sur-Yvette, France

Expected 2029

**Federal University of Rio Grande do Sul (UFRGS)**

*Bachelor of Computer Engineering*

Brazil

Expected 2029

## TECHNICAL SKILLS

**Languages:** Python, C++, Java, C, SQL, JavaScript/TypeScript, Assembly

**Frameworks & Libraries:** Next.js, React, Flask, Prisma ORM, Scikit-learn, Pandas, XGBoost

**Tools & Environments:** Git, Linux, Google Cloud Platform (GCP), OpenGL, MATLAB

**Core Competencies:** System Architecture (MVC), Machine Learning, Low-Latency Logic, API Integration

**Spoken Languages:** English (C1 / Fluent), French (C1 / Fluent), Portuguese (Native)

## TECHNICAL PROJECTS

**UK Energy Forecasting (EI Climat)** | *Python, Pandas, XGBoost, AutoGluon*

Jun 2026

- Developed an end-to-end machine learning pipeline to forecast short and medium-term UK household electricity consumption across 3 socio-economic segments.
- Evaluated and tuned Ridge Regression, **XGBoost**, CatBoost, LightGBM, and **AutoGluon** TimeSeries models, achieving a best half-hourly validation RMSE of 0.0082 over 4,000+ rows.

**Voice CRM Platform** | *Python, Flask, React, GCP, Gemini AI*

Nov 2025

- Architected an AI-powered automation platform utilizing **Google Cloud Speech-to-Text V2** to process remote audio files, bridging speech recognition with enterprise data pipelines.
- Integrated **Vertex AI Gemini** to semantically parse transcripts and autonomously trigger **HubSpot APIs**, dynamically creating complex CRM entities and eliminating manual data entry.

**HiDrone Web Marketplace** | *Next.js, Prisma ORM, TypeScript, MVC*

May 2025 – Aug 2025

- Architected a highly scalable, full-stack drone delivery marketplace implementing a strict **MVC design pattern** for clear separation of application logic and user interfaces.
- Engineered the backend database and business logic utilizing **Prisma ORM**, ensuring secure user authentication, role-based access control, and dynamic order management.

**3D Tower Defense Engine** | *C++, OpenGL, Real-Time Logic*

May 2025 – Jul 2025

- Developed a third-person real-time strategy game in **C++** and **OpenGL**, processing complex geometries of 10,000 faces with Gouraud and Blinn-Phong lighting models.
- Engineered custom bounding-box collision detection algorithms and dynamic enemy pathfinding utilizing **Bezier curves** governed by a strict time-step game loop.

## EXPERIENCE

**IDE Jr.**

*Web Developer & HR Assistant*

Remote, Brazil

Jan 2024 – Present

- Architected and deployed fully responsive, full-stack corporate websites using **Next.js** and **React**, delivering scalable digital solutions that modernized client web presence.

- Streamlined internal operations by managing sensitive employee contracts and coordinating logistics for corporate events.

### CentraleSupélec

France

*Summer School BasiCS Tutor*

Jul 2026 – Aug 2026

- Instructed incoming international students in the **Modeling and Control of Dynamic Systems**, translating complex mathematical control theory into accessible, pedagogical course materials.
- Collaborated within a 3-person technical instructional team to author and present comprehensive curriculum slides and practical problem sets.

### Federal University of Rio Grande do Sul (UFRGS)

Brazil

*Algorithms and Programming Tutor*

Oct 2024 – Jan 2025

- Directed weekly laboratory sessions for undergraduate engineering students, debugging complex **C programming** code and reinforcing advanced algorithmic problem-solving techniques.

### Undergraduate Researcher | LASCAR Laboratory

Brazil

*Embedded Systems & Network Optimization*

Mar 2023 – Sep 2023

- Optimized embedded software systems for 3D mapping UAVs, refining spatial data processing algorithms to ensure high-fidelity environmental capture.
- Researched and facilitated the technical implementation of **Information-Centric Networks (ICNs)** to enhance network routing protocols.

### Braskem

Brazil

*Electronics Maintenance Intern*

Jan 2022 – Dec 2022

- Engineered and deployed a portable automated testing station for synchronous machines, establishing direct hardware-software integration to accelerate component evaluation protocols.
